1. BASIC MACHINE INFORMATION

Bed type mill is very high precision and CNC controlled machine. Therefore, before operating this type of the machine, please read this manual carefully, and make sure you have the knowledge to operate this machine properly. If you have any question, please contact our local distributor. We will answer your question promptly.

1-1. Machine Specification

Specification	Model	e-1050B w/3 Axes Drive	e-1050B w/2 Axes Control	e-1050B	e-1050BII	e-1054B	e-1054BII

1-2. Accessories of the Machine

1-2-1. Standard Accessories

- a. Three axes C5x2B ball screw**
- b. Timed lubrication pump**
- c. Leveling pads & screws**
- d. Tool box w/tools**
- e. Three axis CNC control or other specified control, i.e., regular machine control.**

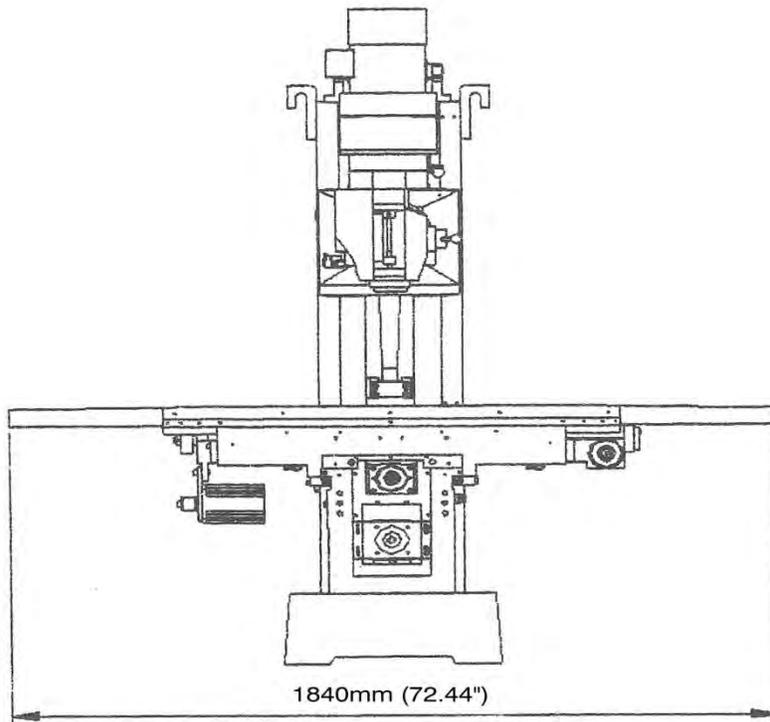

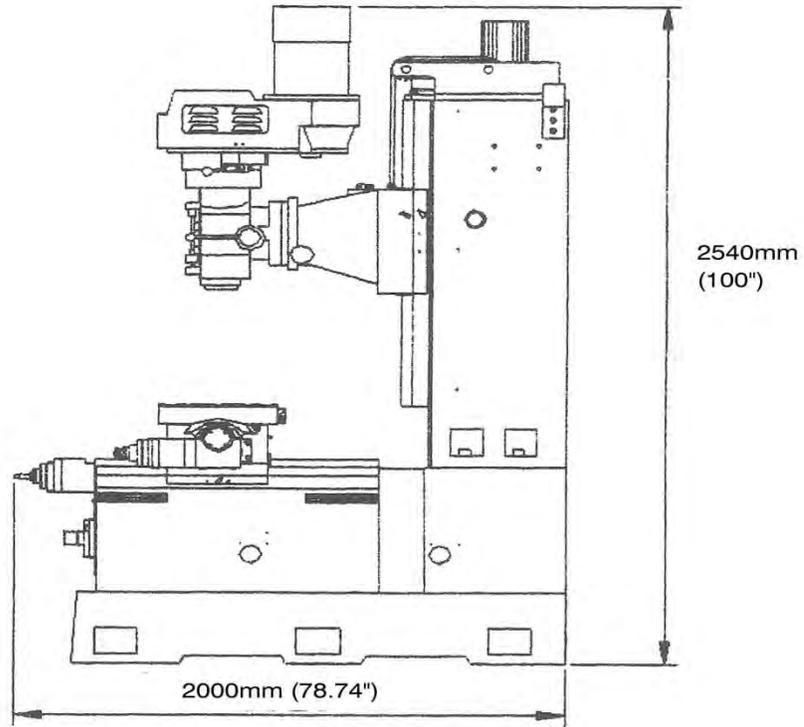

1-2-2. Optional Accessories

- a. Table top splash guard**
- b. Y axis metal type way cover**
- c. Air power draw bar**
- d. Side chip guard**
- e. Chip & coolant pan**
- f. Halogen light**
- g. T slot cover**
- h. Clamping kit**
- i. Milling vise**
- j. Horizontal/vertical rotary table**
- k. Super indexing spacer**
- l. CAT/BT#40 collet holder set**
- m. Hydraulic machine vise**
- n. Tool maker's vise**
- o. CNC power vise**
- p. Right angle attachment**
- q. 4th axis rotary table**

1-3. Floor Space of the Machine

Unit: mm

Machine only w/t Sheet Metal

2. INSTALLATION

2-1. Machine Foundation Requirement

Incorrect foundation will affect machine's accuracy. Only correctly done foundation will avoid machine vibration, reduce machine malfunction, and loosening level of the machine. All these factors will contribute to machine's machining accuracy.

Every machine has a different control and is weighed differently. They are also designed different. Therefore they also need a different foundation. We strongly suggest customers to build the foundation according to the requirement (shown on fig. 2 & 3).

All new machines, we have supply with leveling pads and screws. They are used to level the machine, and reduce the vibration. All accessories are shipped with the machine.

Please check for any missing items and contact your distributor for replacement.

2-2. Installation & Its Site

To prolong the life of the machine and its accuracy, please carefully select the proper installation site. The criteria are:

- a. Find the site where there is vibration-free and there is no power shortage. Please avoid install the machine around press, shaping machine etc. They will affect the accuracy of the machine.**
- b. Never install the machine under direct sunlight or where humidity is high.**
- c. Avoid the site where there is corrosive powder and mist.**

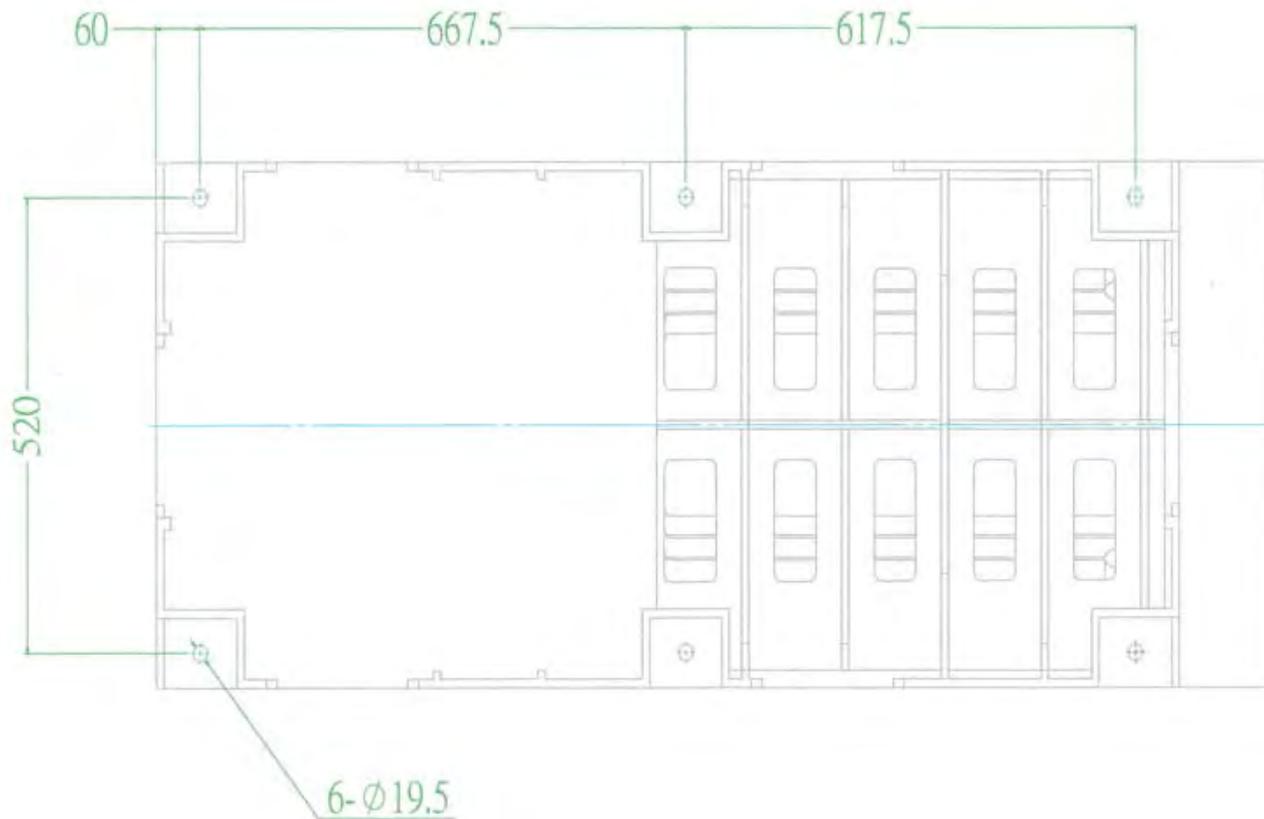

2-3. Level & Leveling Screws

The method of building the foundation is as figure 2. Please build the foundation 15 days before machine arrive. The procedure is as follow:

- a. Check the foundation map before digging.**
- b. Dig the foundation area to the proper depth, flatten it, fill it with rocks, and use rubbles to fill the gaps.**
- c. Make the screw molds for selected leveling screw area. Make sure they are not out of straight or penetrate out of shape.**
- d. Concrete mix ratio is 1:2:4 (concrete: sand: small rubbles) They need to be mixed thoroughly, and make sure the concrete mix has the right elasticity and color content.**
- e. Before pouring in the concrete mix, place the screw molds in place. They are prepared for J type locating screws.**
- f. After concrete solidified, you may remove the molds. In summer, the time required for concrete to solidify is 4~5 days, and in winter, it is 8~10 days.**
- g. When the machine is shipped to the location, install the J type locating screws through leveling screws and screw on the hex nuts, and then slowly settling down the machine on the foundation site. Be sure to match each J screw position before completely lowering down the machine.**
- h. After adjust each J screws' length to 6'' above the ground, the concrete can be**

poured into the J screw positions.

- i. After the concrete is solidified, you may then adjust the level of the machine.
- j. Machine level in X and Y axis has to be within 0.0008/12" or better.

****Above is the foundation map of e-1050B & e-1050BII**

Unit: mm

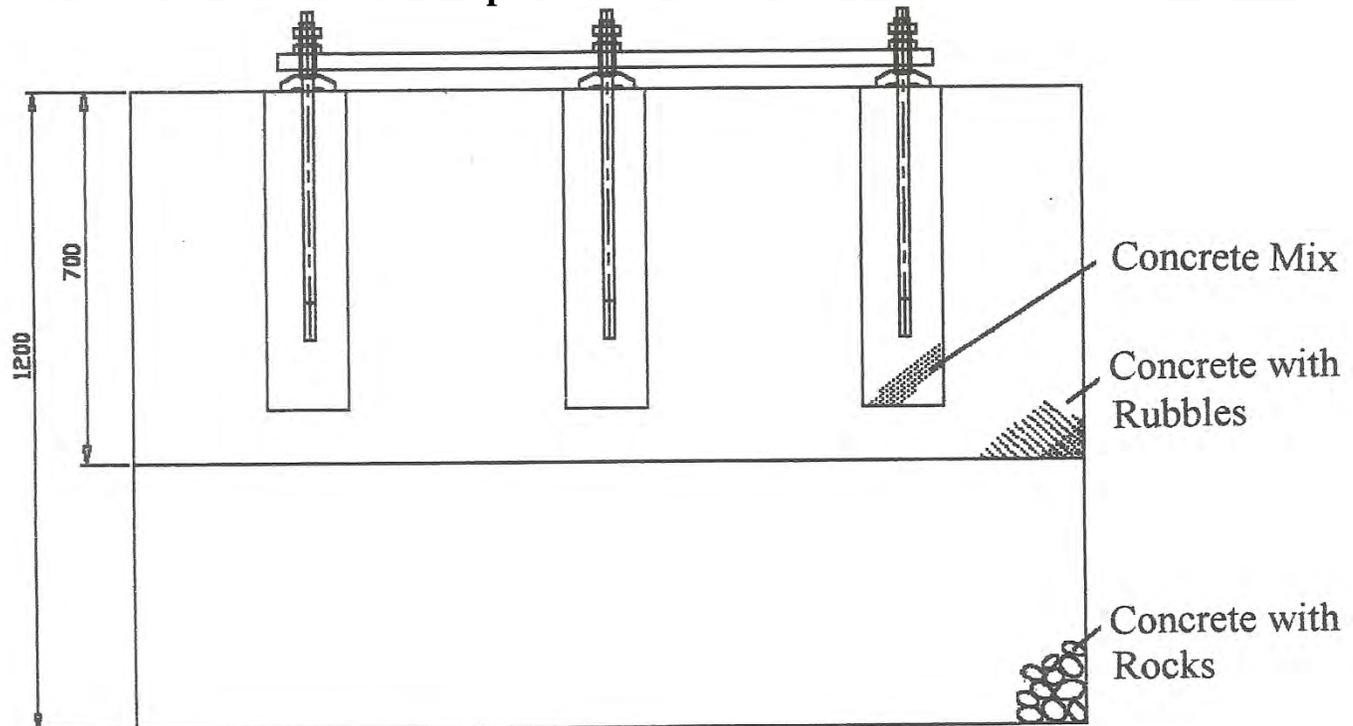

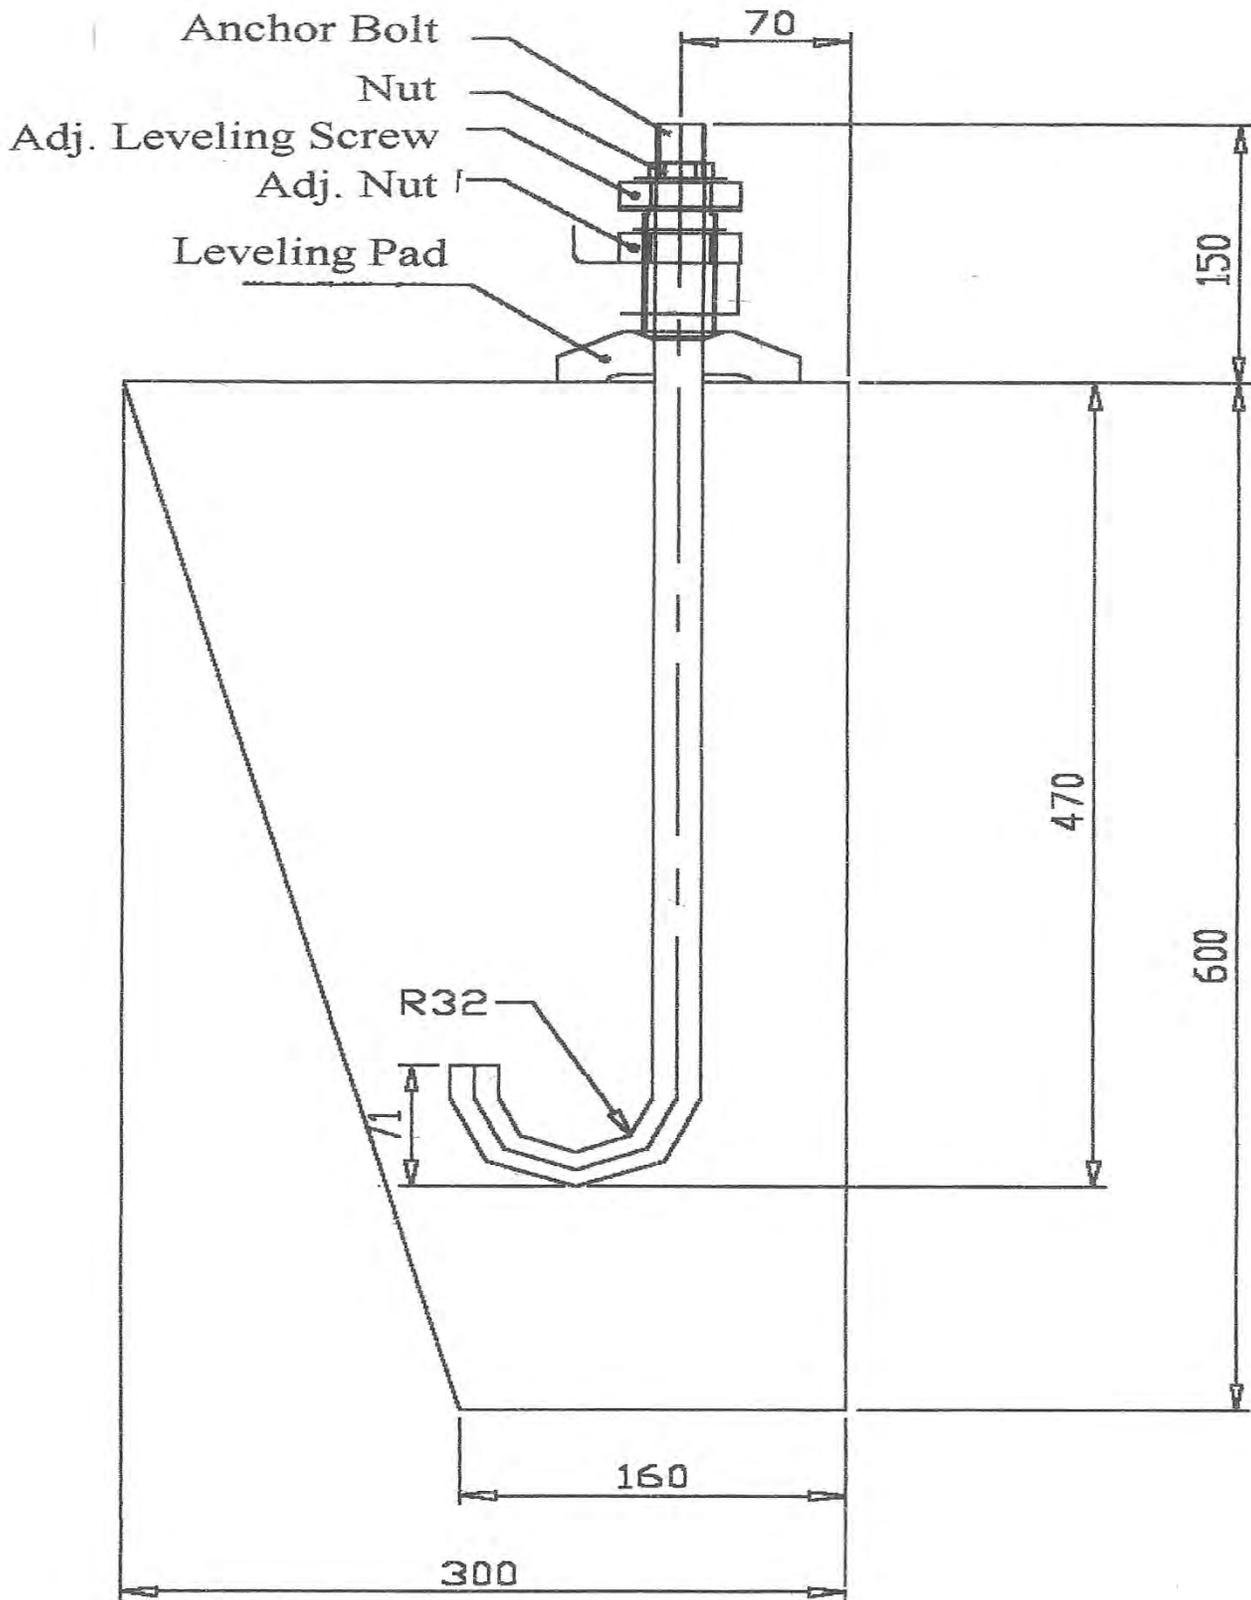

Figure 2

Foundation Bolt

3. MACHINE PACKAGE & ITS METHOD

To make sure quality and accuracy of the machine are maintained. Before machine is shipped out, we carefully inspect packaging procedure and check the final packaging pallet. Until they are done properly, we will not ship it out.

Package Method Before Shipping:

On the pallet, a PE plastic bag is set on top of it. Then the machine is lowered on the pallet, and is screwed tight onto the pallet. Before the PE plastic bag is wrapped up, absorbent bags are placed and machine is sprayed with cosmoline. Please see the following picture for sample (Figure 4).

To reduce the vibration when shipping, all movable items are fixed and screwed at a particular position. The positions are as follow:

- a. X axis ball screw is fixed by tighten the table clamp lever to the saddle. (Fig 5)
- b. Y axis ball screw is fixed by tighten the saddle locking lever to the saddle. (Fig 5)
- c. Z axis ball screw is fixed by the wooden block under the spindle nose. (Fig 5-1)
- d. Balancing block is tightened at column. (Fig 5-1)
- e. Control box is support on top of the table with wooden block. (Option)

*****To make sure all levers and locating items are loosen, please double-check and make sure all of them in doubt are “surely” loosen before operating the machine.**

Packing for Shipment

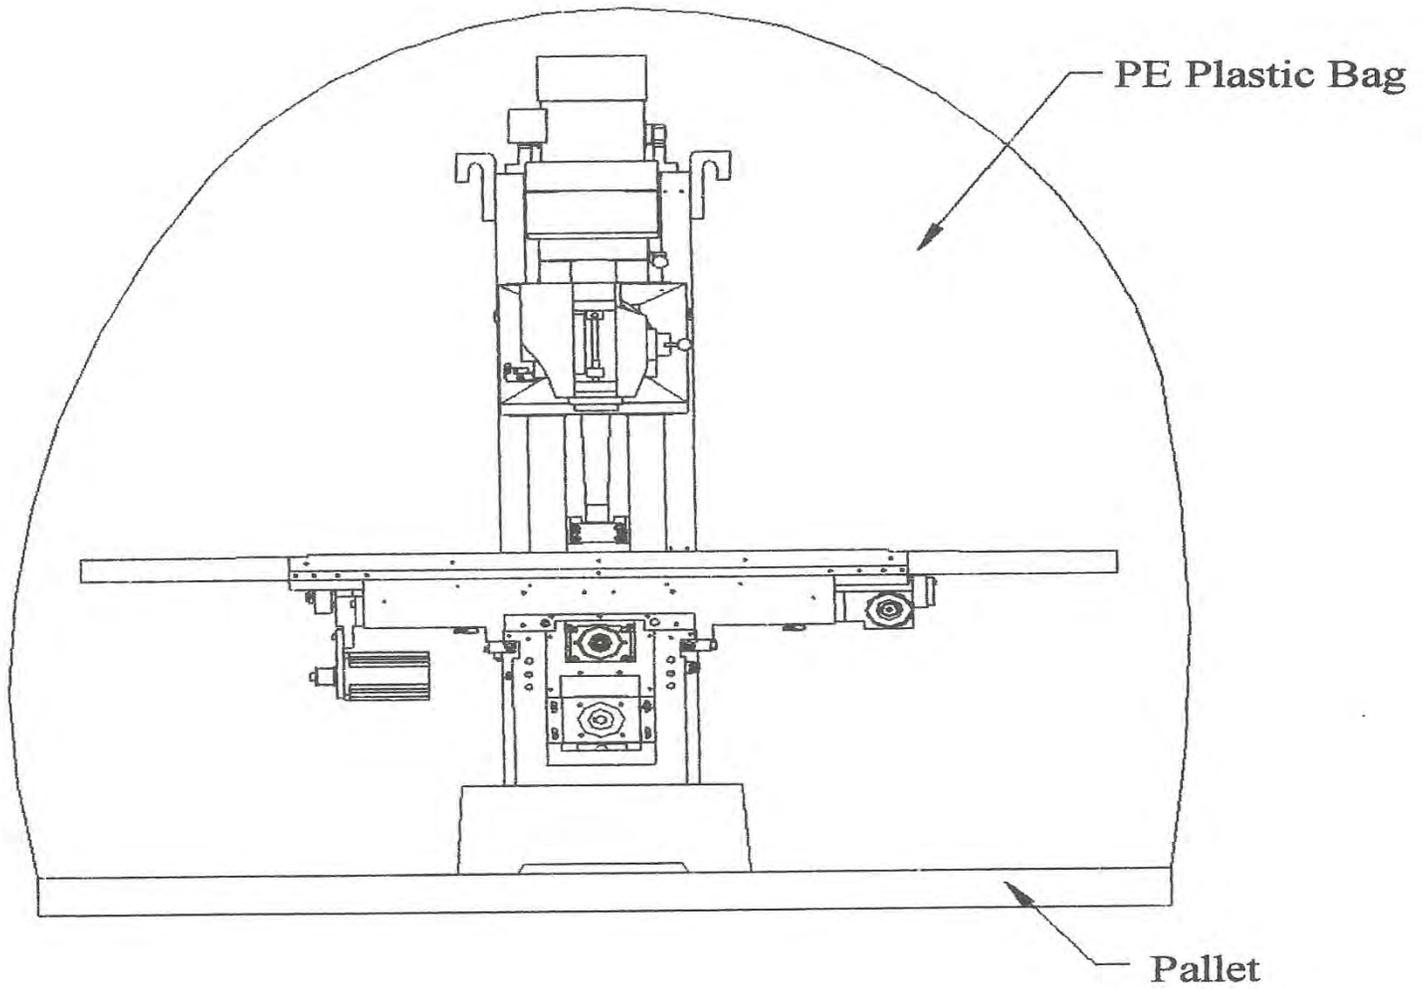

Figure 4

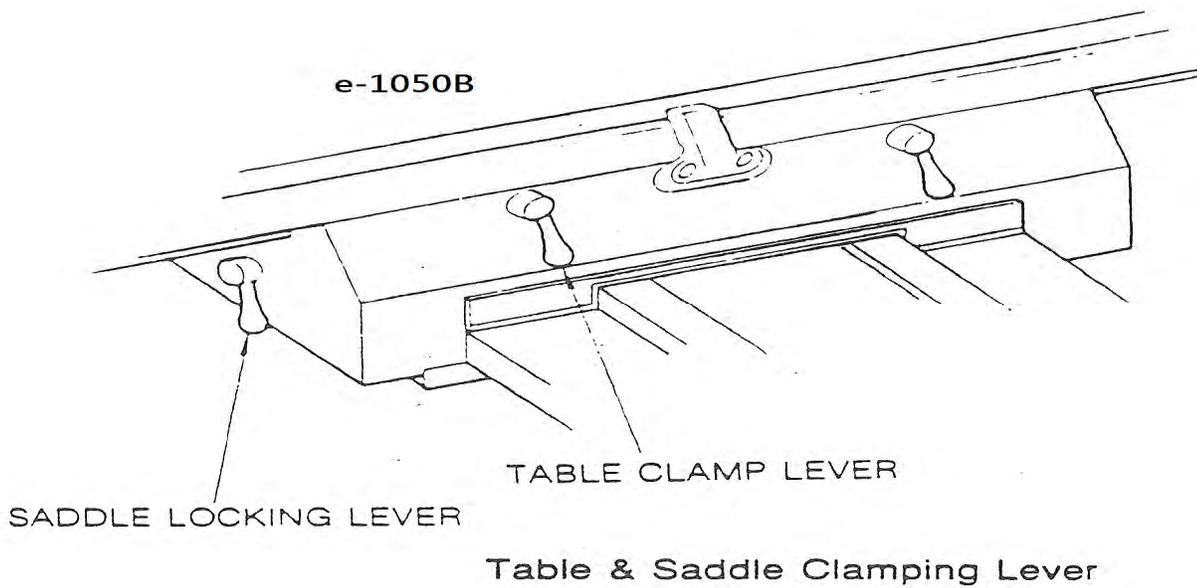

Figure 5

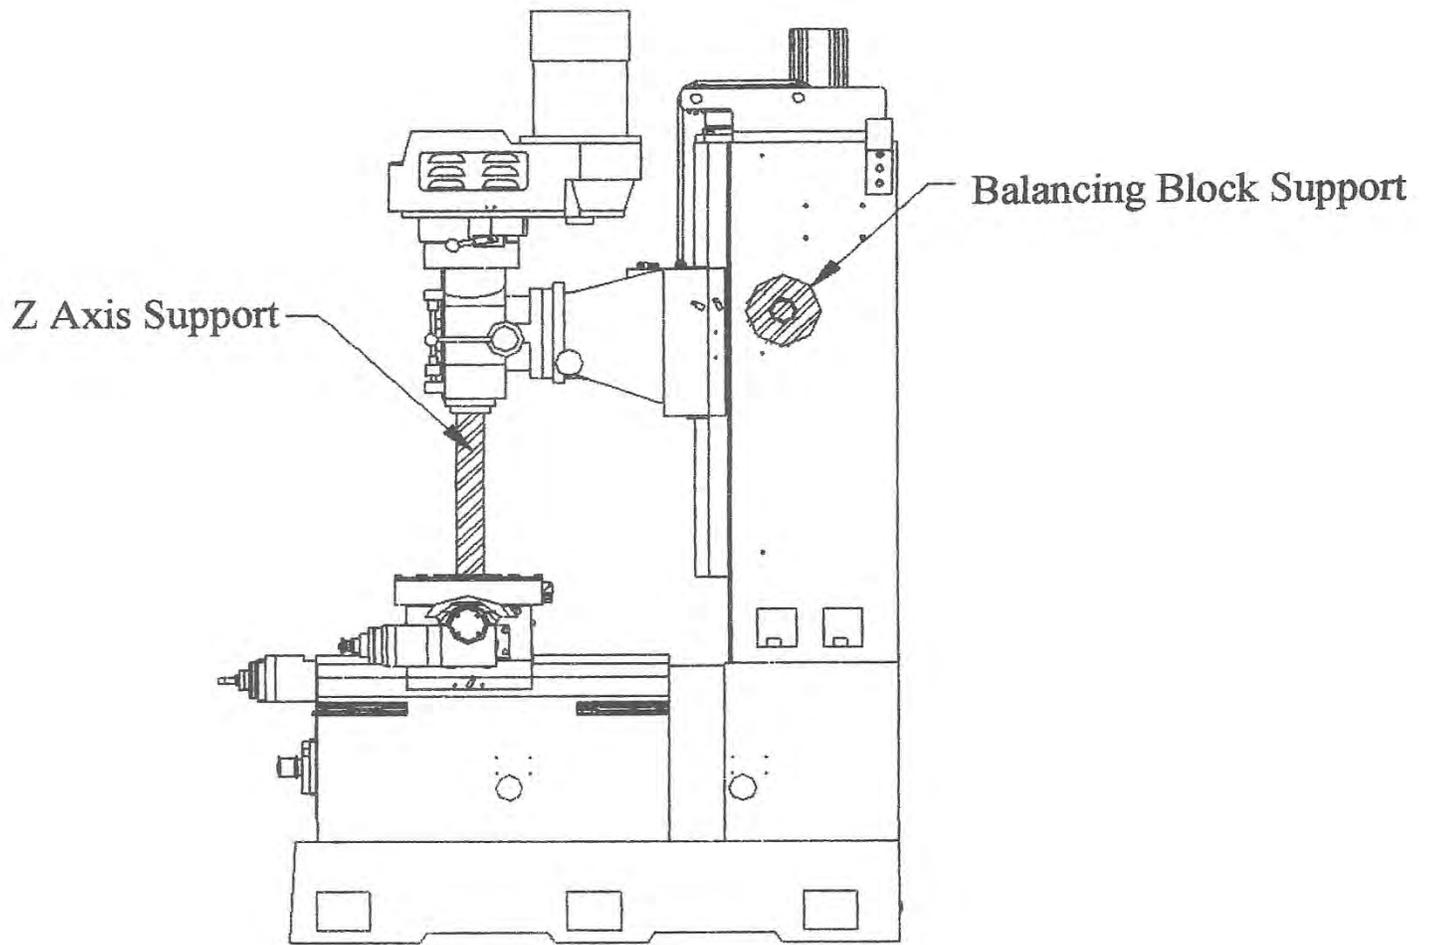

Figure 5-1

4. UN-PACKAGING & INSTALLATION ON SITE

When the machine arrives to the site, unscrew the locating bolts and nuts before lifting the machine. Transporting the machine onto the site is very dangerous. So please follow the instructions below carefully:

- a. Before settling the machine, make sure the locking items have not been loosen.**
- b. On the way to transport the machine to the site, make sure there is no obstacle or make sure all personnel are out of the way.**
- c. After removing from the pallet, the transporting equipment (example such as forklift) must have a capacity over 8,000 lbs (4 tons) to move or lift the machine.**
- d. When lifting, the machine must stay balanced. It might tip over and damage the machine if it is not balanced.**
- e. When transporting, please do not vibrate the machine too much. Vibration will cause the machine to lose its accuracy.**

Installation of machine:

Depending on the term, customer can request assistance from the factory or distributor. They can assist to do the installation and train the customer.

Machine Transporting with Overhead Crane

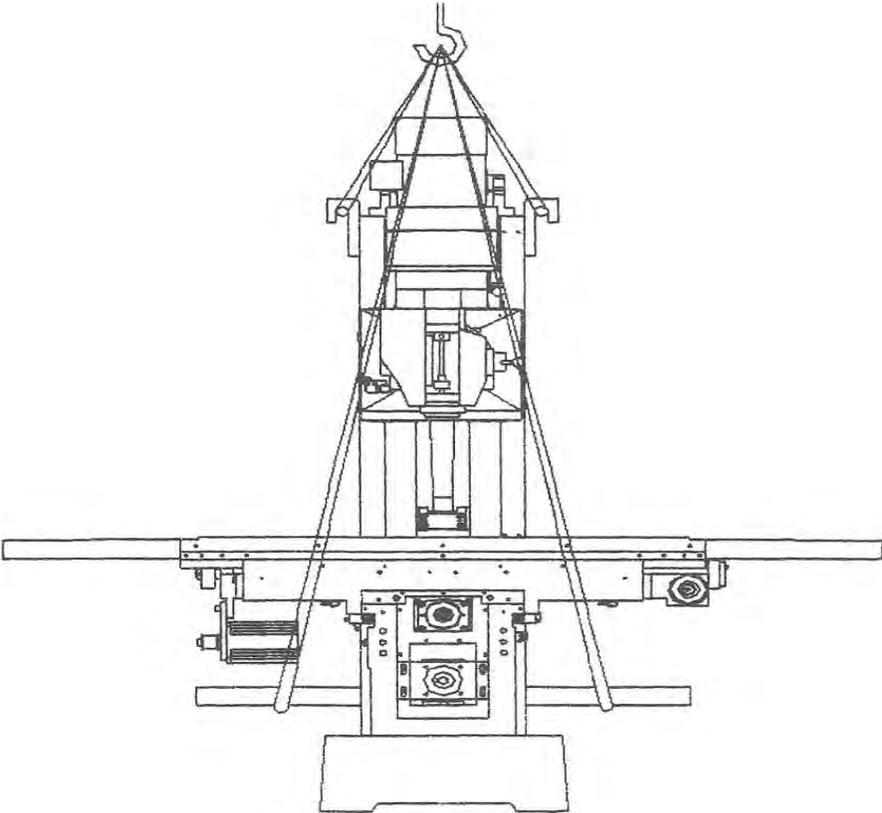

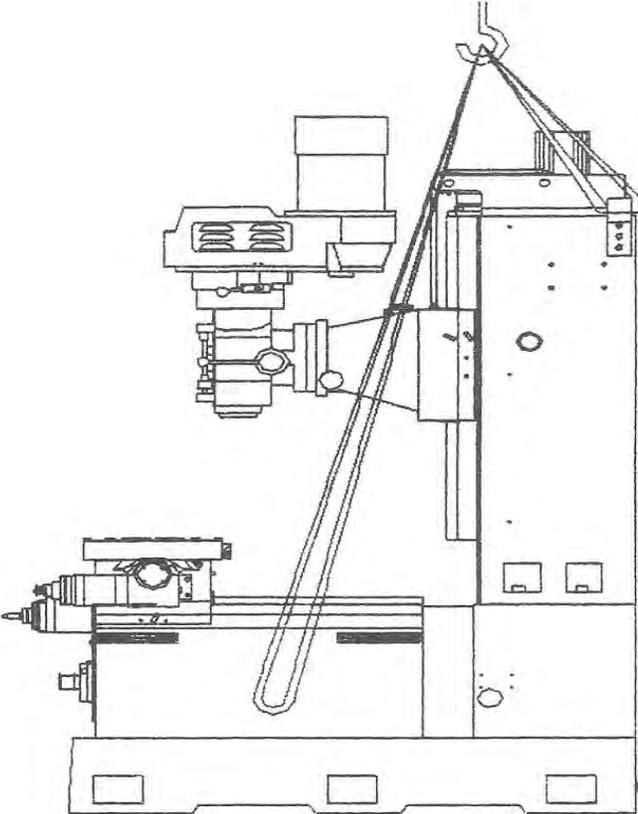

Figure 6
Machine Shipment on Pallet

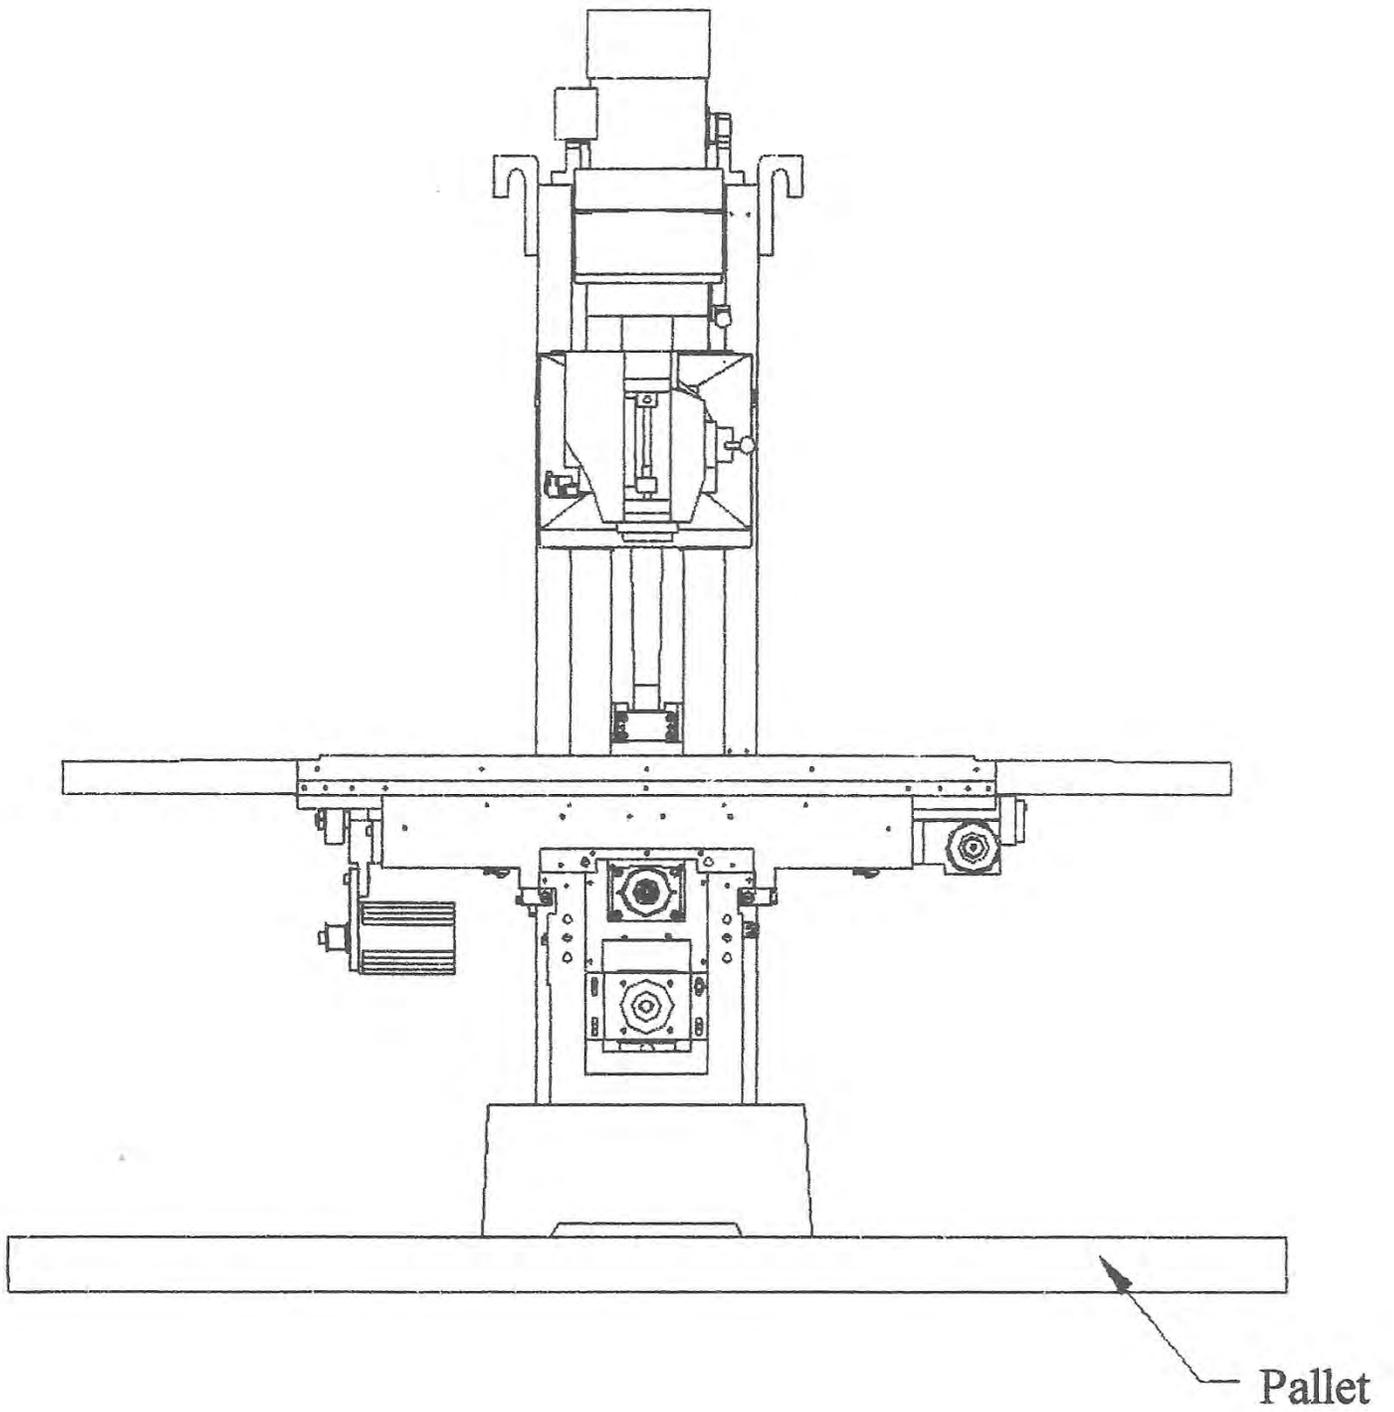

Figure 7

5. PROCEDURE BEFORE INTIAL OPERATION

To increase operation efficiency and maintain machine accuracy, please check the following points:

- a. Is power source within 10 % of 230V or 460V or 10% of local voltage?**
- b. Is compressor pressure within specification (on model e-1050BII only)?**
- c. All locating items are removed and loosen?**
- d. Are all cosmoline cleaned?**
- e. Are all movable items removed from the table top, X, Y, Z traveling mechanism?**

The above instructions must follow each time before operation. This is done to reduce the chance of damaging the machine, and also might otherwise hurt the operator or bystanders accidentally.

6. PREVENTIVE MAINTENANCE

6-1. Everyday maintenance:

- 1. Check the oil level of lubrication pump. Add more if it is below low level.**
- 2. Check all lubrication points to see if oil is present.**
- 3. Check compressor pressure to be 6 kg/cm ². (e-1050BII model only)**
- 4. Check all air hoses for leaking. Must fix the air leak if it is found! (e-1050BII model only)**
- 5. Check oil level of air filter gauge. Add if not to the level. (e-1050BII model only)**
- 6. Remove all movable items from the machine to reduce the chance of damaging the machine and operator.**
- 7. Check coolant system to see if it is operational?**
- 8. After each day's work, clean the machine and lubricate all moving parts.**
- 9. Spindle taper must be clean and lubricated each day.**
- 10. Add a few drops of #10 spindle oil into oil cups around the milling head.**
- 11. If any false signal is present, please stop the machine and repair the machine immediately.**

6-2. Weekly maintenance:

- 1. Please use clean rugs or paper towels to clean halogen light and control panel to keep them readable.**
- 2. Use water based solvent to clean air filter. This is to keep air pressure normal and machine operational. (e-1050BII model only)**
- 3. Make sure spindle taper is smooth and chip-less.**
- 4. Check all lubrication points and lubrication pump to see if they are function normally.**

6-3. Six month maintenance:

- 1. Check taper run-out of spindle to see if it is still within accuracy.**
- 2. Check all machine's screws and nuts to see if they are still tight?**
- 3. Check the tightness of the gibs. Are they still within specification?**
- 4. Inspect all electrical terminals and wires. Make sure they are normal and functional. Clean the dust within the electric cabinet.**
- 5. Inspect the servo drive and its parameters. Make sure they are adjusted.**
- 6. Level the machine with precision engineering levels again. Levelness should come within 0.00008/12" (0.02mm/300mm). If not, please re-level the machine.**
- 7. Lower head gear housing must add grease thru the grease fitting.**

6-4. Yearly maintenance

- 1. Check all electric components on the control panel to see if they are still**

sensitive.

2. **Remove all carbon deposit on the magnetic contactors.**
3. **Check balance block mechanism. Are they functional?**
4. **Replace coolant liquid with new one to ensure machining accuracy.**
5. **Clean and replace lubrication pump's oil reservoir with new way lube oil.**
6. **Check leveling and adjust the machine to maintain machine accuracy.**

6-5. Points to watch on doing maintenance

1. **All scheduled maintenance must be exercised and recorded.**
2. **During mechanical maintenance such as gibs adjustment, etc., all power must be shut-off to prevent accidental injury.**
3. **When inspecting servo drive boards outside of their sockets, do not supply power! It might cause servo motor to rotate in its high speed state and cause injury.**
4. **In any unable maintenance situation, please contact authorized distributor or corresponding manufacturer.**
5. **Before doing any maintenance work, maintenance personnel must concur with manual to disconnect power or not. This is to reduce accidental injury.**

7. LUBRICATION SYSTEM

7-1. Lubrication of the machine

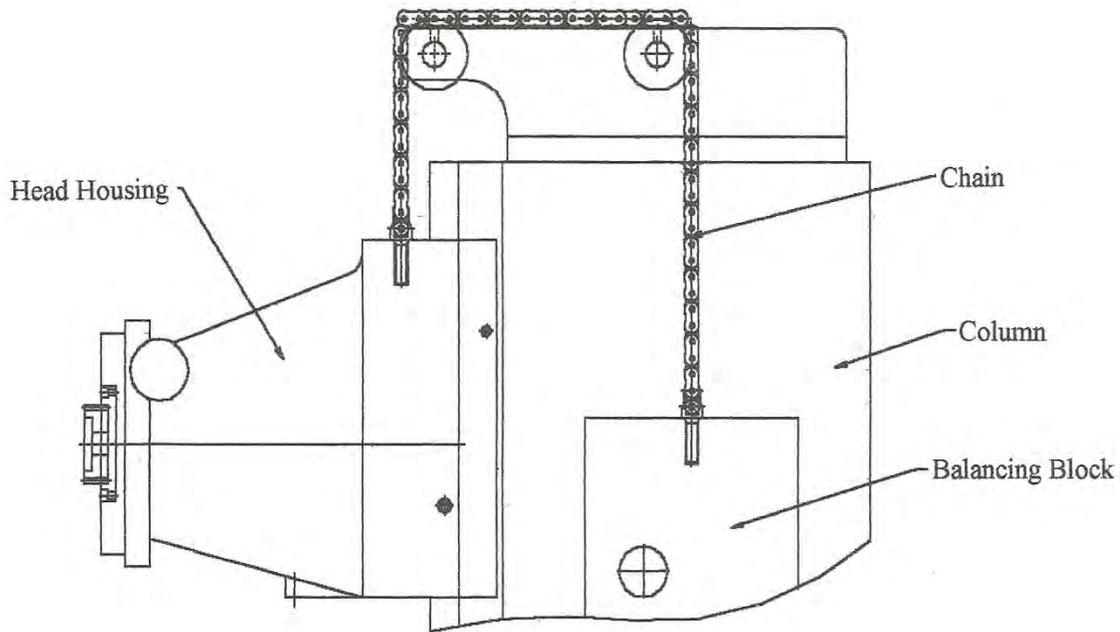

All machines have lubrication system. To maintain their accuracy, users must check and inspect lubrication system every so often. A properly lubricated machine will prolong its life-span and maintain its accuracy longer. All sections of a machine need to be lubricated, but there are few parts that particularly need more attention:

- a. Spindle bearing has seal packed high pressure & temperature grease. It needs to be inspected for its condition every 6 months. Recommended grease type: Kluber LDS 18 or equivalent.**
- b. Some section of slideways are coated with Turcite-B to reduce wear and vibration. The waylube oil for this type of material must have high viscosity, and it is tolerable to high pressure and very wear resistance. Recommended oil type: Mobil Vactra # 2 waylube, Chevron 68X waylube or equivalent.**
- c. All ball screws must be lubricated. They need oil present at all time. Recommended oil type: See item b.**
- d. Balance block's chain mechanism need to be greased when needed. Recommended grease type: Any lithium based grease is OK.**
- e. Air filter unit needs #10 spindle oil when below recommended level.**

7-2. Lubrication Chart

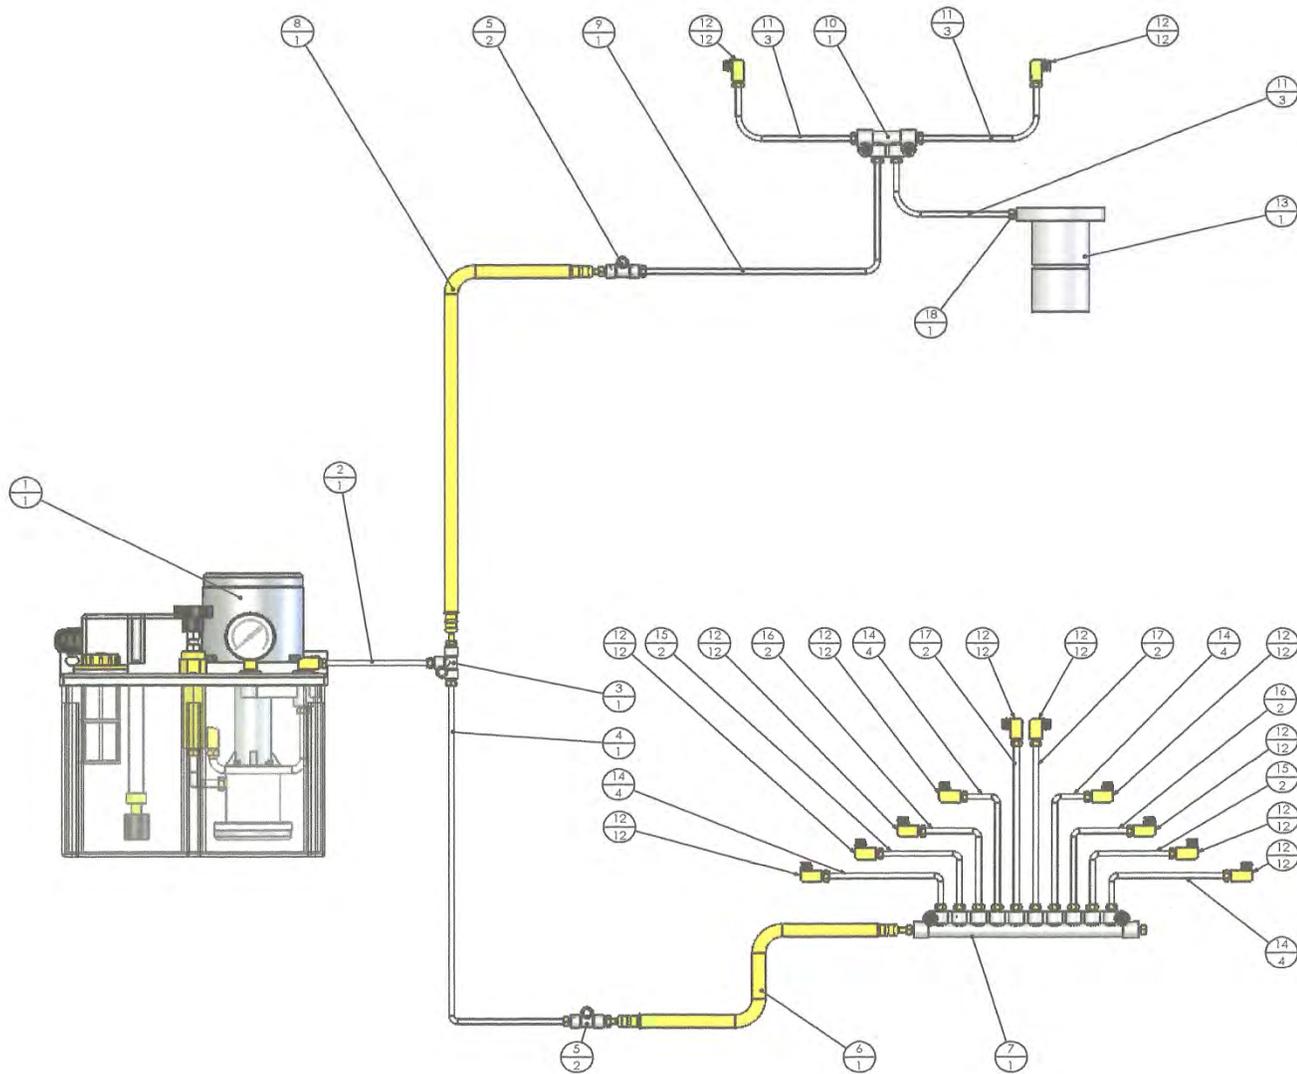

Lubrication Area	Table, Saddle, Slideways, X, Y, Z Ball Screws	Cutting Tool	Air Filter Unit	Chain, Chain Gear	Pressure Unit
Volume	3 Liters	Circulation	Mist Lub.	Hand Grease	Hand add Oil
Schedule Changing	Add if Below Level	Every Year	Add if Below Level	Every 6 Months	Every Year
Oil Type	*Viscosity ISOVG68 *Thickness > 100 *High Pressure, Friction Resist. *Anti-rust, Bubbleless, Oxidization Resistance	*High Heat Resistance *High Pressure Resistance	*Viscosity ISOVG32 *Thickness >95 *Anti-rust, Bubbleless, Oxidization & Colourization Resist. *Stable, not Easy to Change	Lithium Based	*Viscosity ISOVG32 *Thickness >95 *Anti-rust, Bubbleless, Oxidization & Colourization Resist
Suggestion	*Mobil Vactra #2 *Esso Febisck 68 *Shell Tonna T68 *Chevron Way-NT68	*Esso Pennex #47 *Shell Dromus B	*Mobil DTE Oil #10 *Shell Tellus #10 *Esso Nuto H10	*Esso #2 *Shell Alvaia R-2	*Mobil DTE Oil #26 *Esso Nuto H32 *Shell Tellus #32
Lube Pump Position	Lower Column	Coolant Tank within Machine Base	Top side of Column	Top of Column	Lower Column

7-3. Manual Lubrication Area

Please grease the chain roller at least every six months. Recommend grease type is shown within lubrication chart of section 7-2.

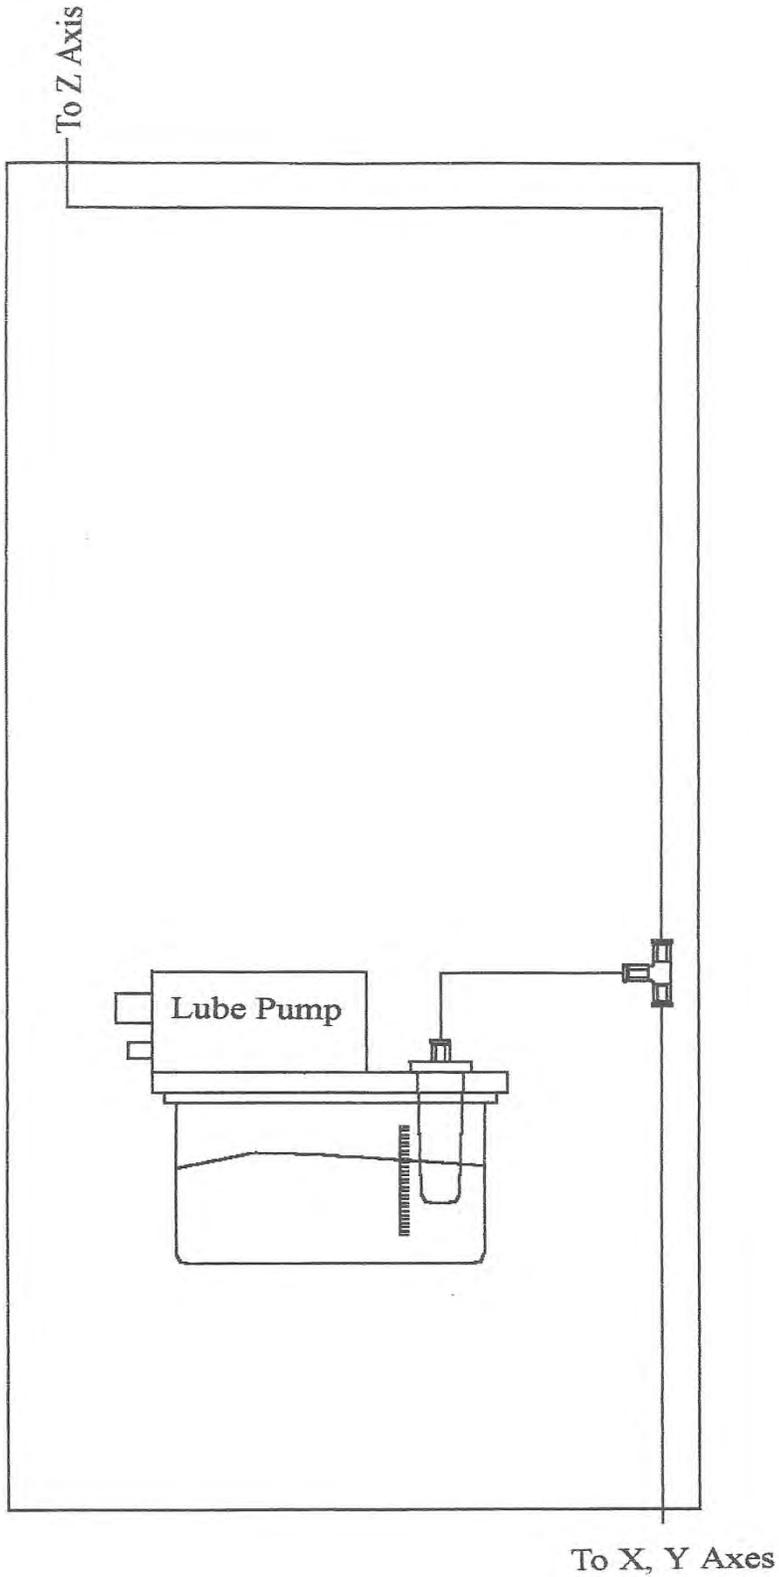

7-4. Distribution of lubrication system

Drawing #: ACER-B1-G01			
Item #	Part #	Description	Quantity
1	ACER-B1-G001	Lubrication Pump	1
2	ACER-B1-G002	4mm Aluminum Pipe (9002)	1
3	9004	A3 Distributing Joint	1
4	ACER-B1-G002	4mm Aluminum Pipe (9002)	1
5	9050	A2 Distributing Joint	2
6	ACER-B1-G004	Flexible Oil Tube 600mm	1
7	9009	A12 Distributing Joint	1
8	ACER-B1-G005	Flexible Oil Tube 500mm	1

18	M8x1	Oil Tube Fitting	1

7-5. Position of lubrication pump

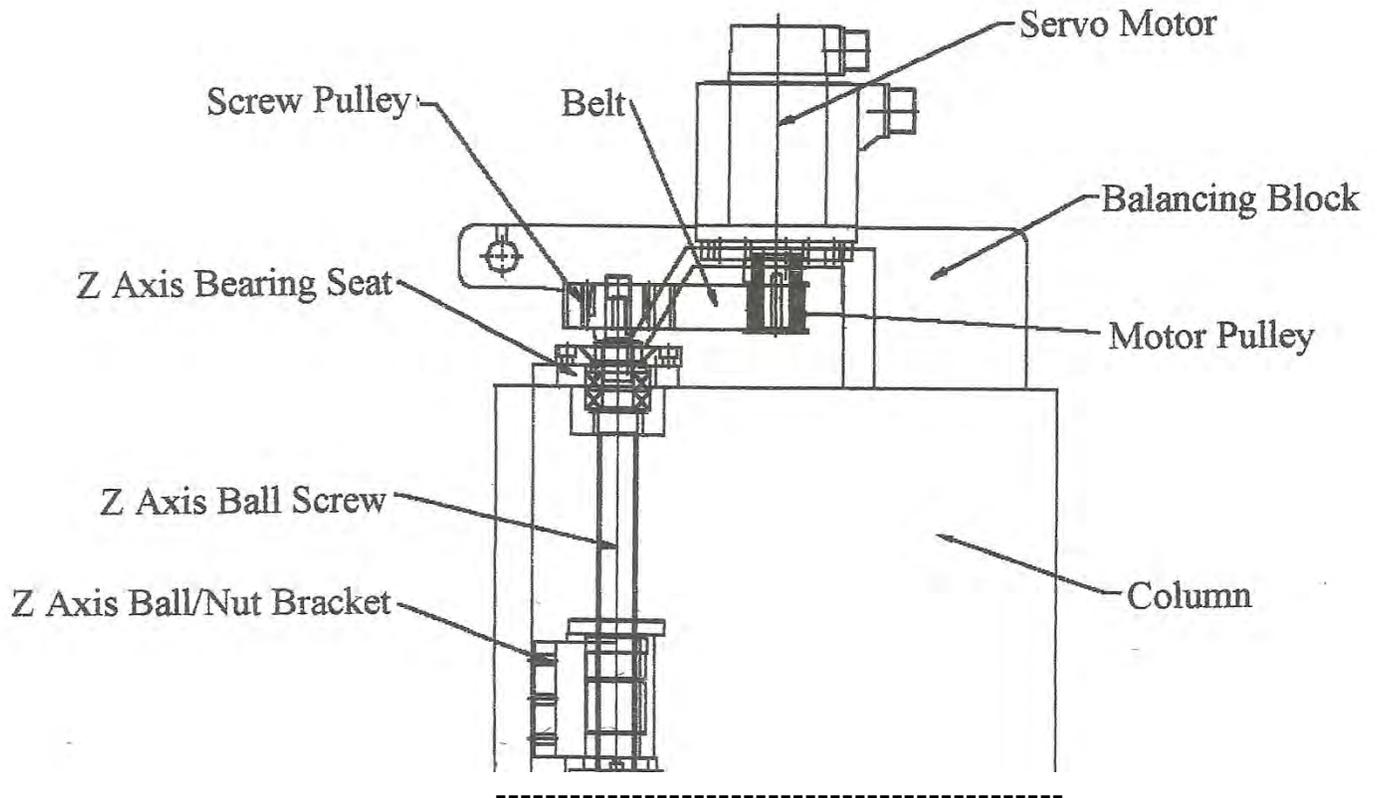

”shown left side of column”

Please add lube oil to the pump whenever it is eyed 1/4 tank full. Recommended oil type is shown within lubrication chart of section 7-2.

8. X, Y, & Z AXES TRANSMISSION METHOD

8-1. Z axis transmission method

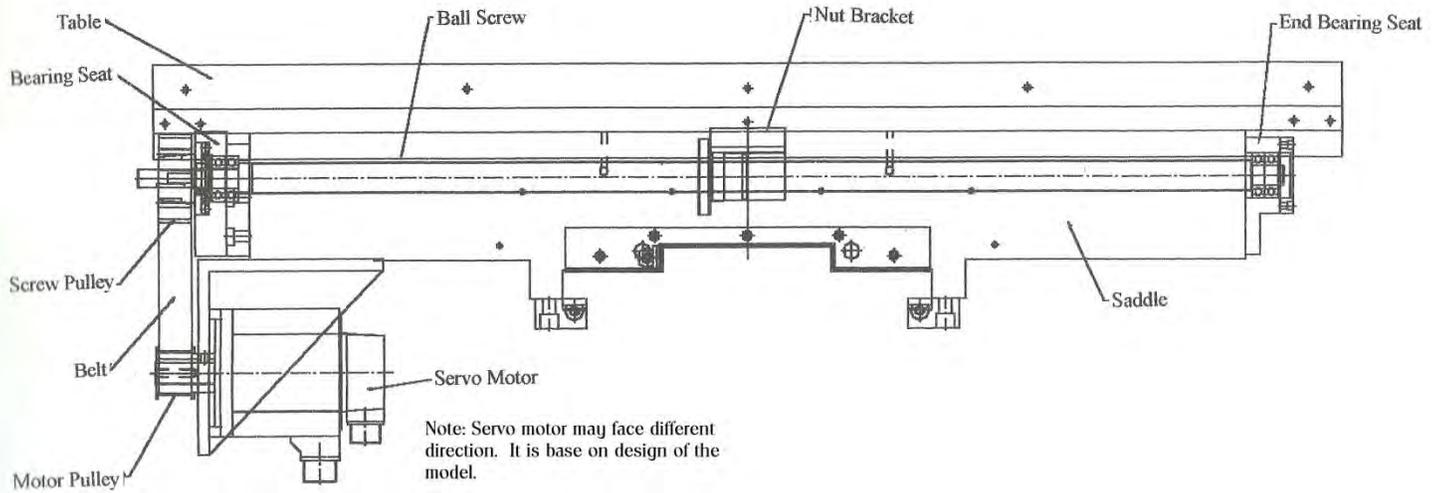

Z axis is driven by AC servo motor. The brand name varies with control brand. Between the servo motor and the ball screw, there are two timing belt pulleys and a timing belt. The head housing moves up and down when servo motor rotates the ball screw in either direction. Please see drawing below:

8-2. X & Y axes transmission method

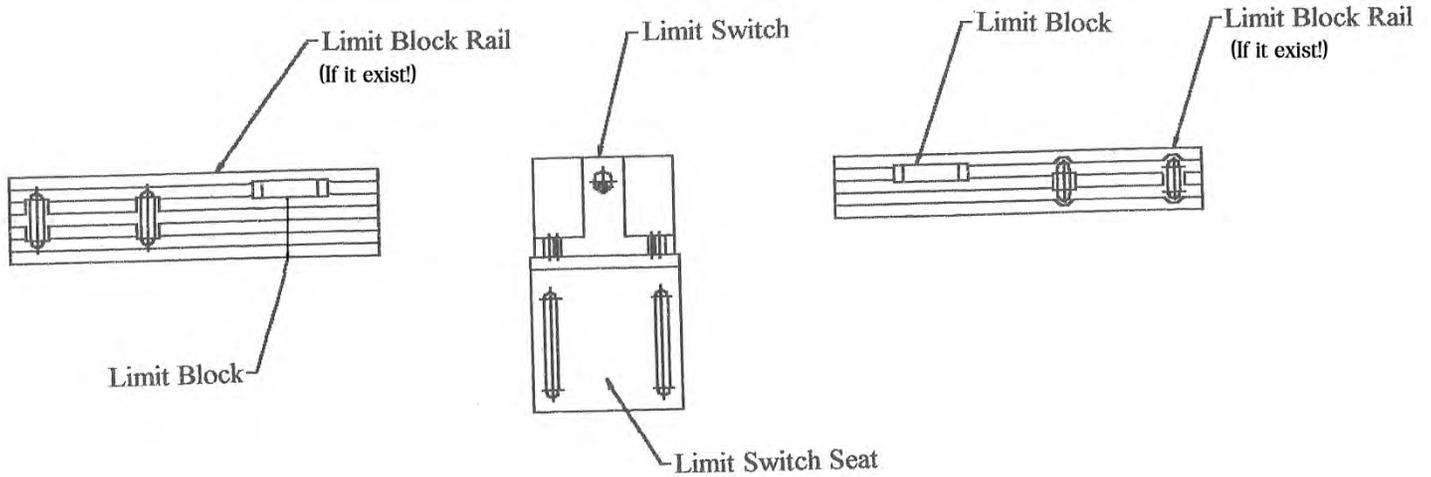

X & Y axes' motion is control by AC servo motor. Name brand is also tagged with control. The servo motors drive the ball screws through two pulleys and a timing belt. Both axes will move when servo motor rotate. The items in motion are saddle and working table.

Please see the drawing below:

8-3. Travel adjustment of X, Y, & Z axes

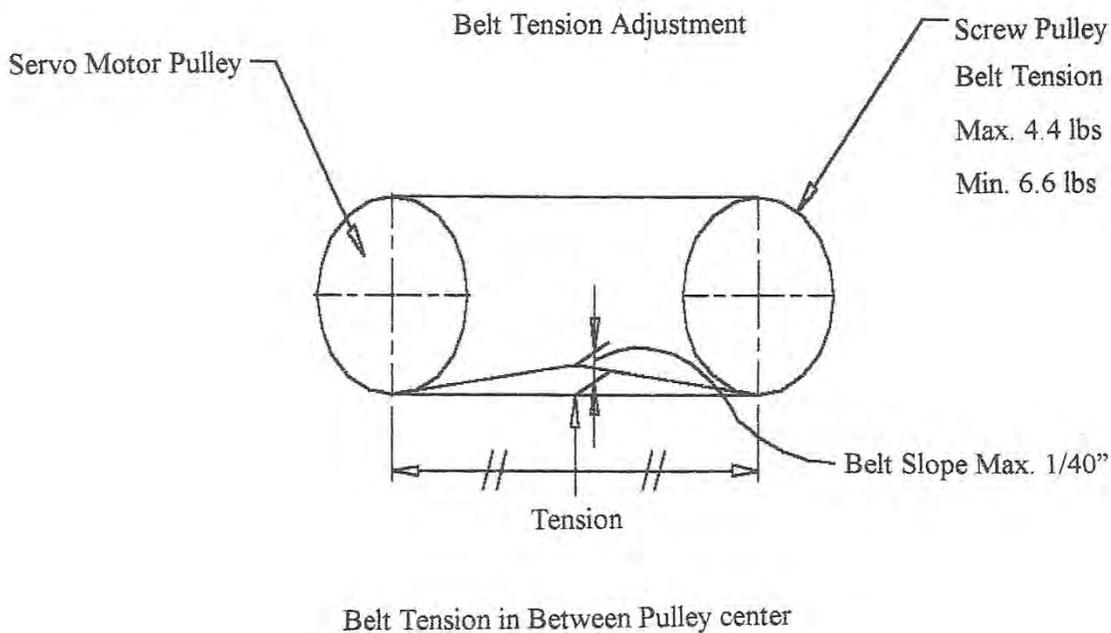

The control package usually comes with maximum travel setting design. This design is to avoid damage when user sets the travel over the travel limit. When machine over travels (on all axes), a limit block will bump a limit switch. The limit switch will send a signal to the control, which will then stop all motions on the machine. Please see drawing for the design below.

9. ADJUSTMENT OF THE TIMING BELT

Because all three axes are drive through using a timing belt, it is essential to keep the tension on the timing belt at constant. Please check the belts every six months and adjust them when needed. The method of adjustment is as following:

- a. Release servo motor by unscrewing the locating bolts.
- b. Re-adjust the motor distance from the ball screw by feeling the tension on the timing belt. The pressure on the timing belt should be between 4.4 to 6.6 lbs.
- d. Screw tight on the motor locating bolts.

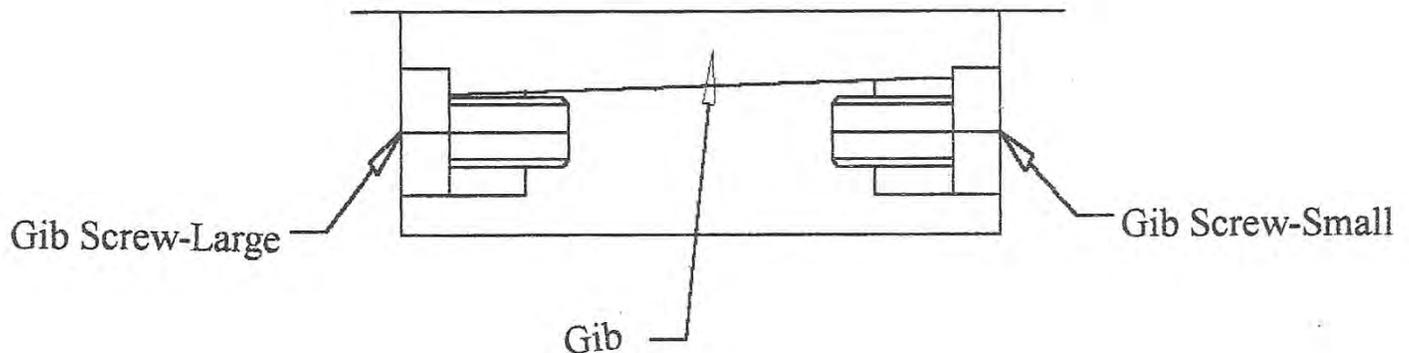

10. ADJUSTMENT OF THE GIBS

During machine's motion, there will be wears on the moving items, and will create backlashes on all three axes. To compensate for this situation, user can adjust gibs to minimize effect.

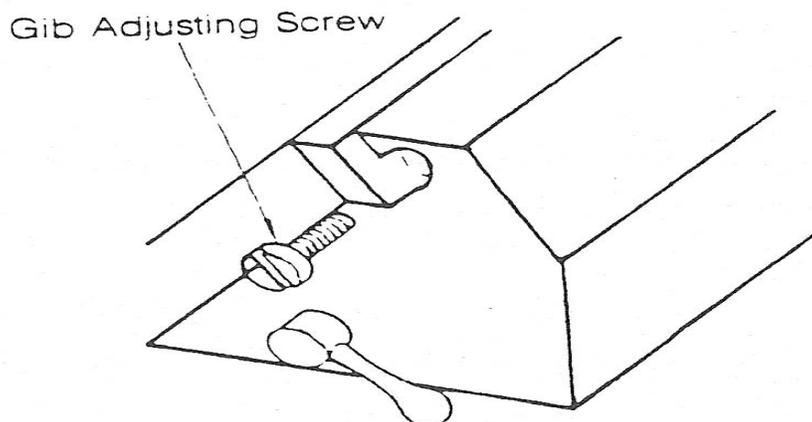

The procedure for adjusting gibs:

- a. Release the smaller taper end gib by unscrewing the gib screw half turn.
- b. Rotate the axis toward the smaller taper end to close the gap between the sliding surfaces.
- c. Screw in the gib screw on the big taper end side.
- d. Repeat the procedure until surface pressure on the gib is 3.5kg/cm².
- e. Check gibs pressure once every six months.

For table gib adjustment (e-1050B):

- a. Unscrew the inner side hex nuts on the stud (show as A on the figure).
- b. Use an open-end wrench to screw in the outer hex nut to proper tension (about 5kg/cm²). Note: Turn the nut clockwise!
- c. When the hex nut is turned about 1/4 turn, move the table left and right to test the tightness of the gib. Repeat this procedure until proper tension is achieved.
- d. Check gib pressure once every six months.

Electric Circuit, Diagram & Breakdown of Electrical Components

11. Electrical Diagram & Its Parts List

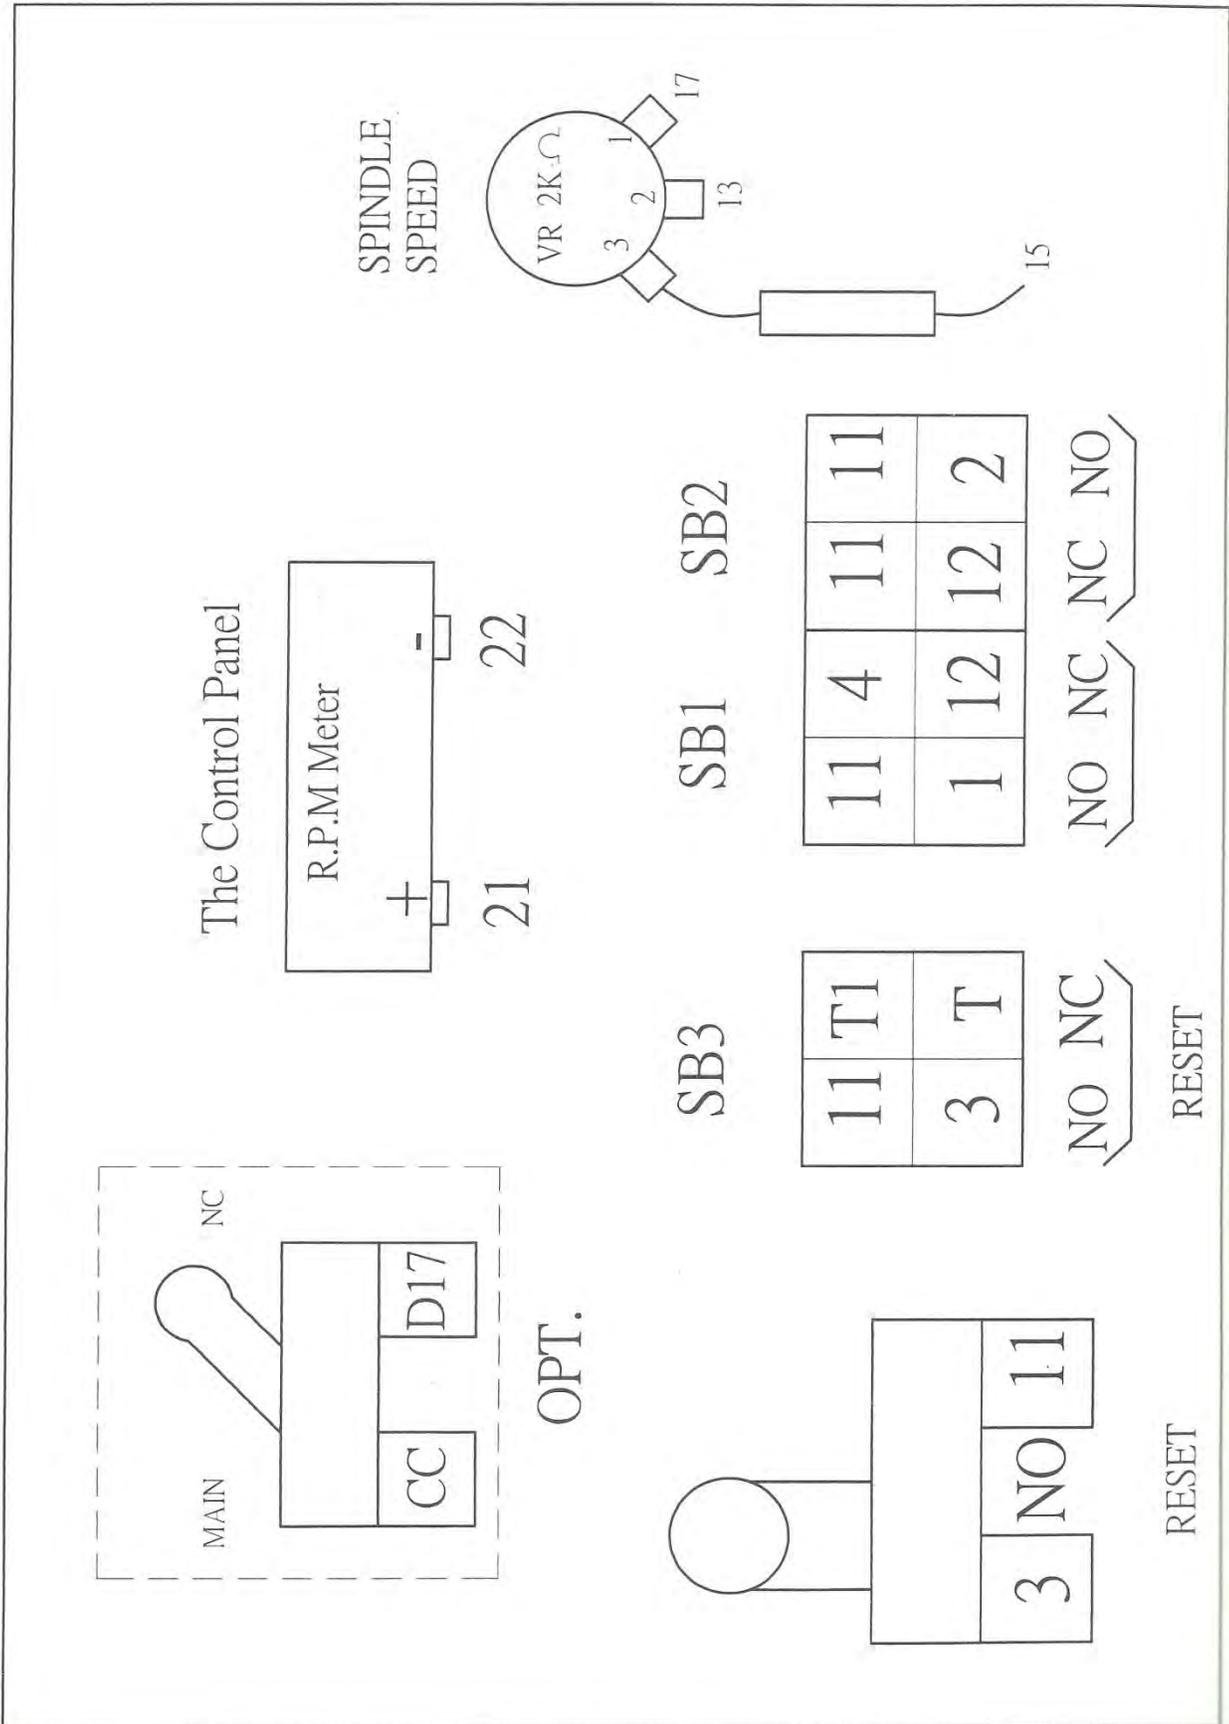

To order parts, please have the following information ready:

- 1. Year of production**
- 2. Model and serial number**
- 3. Item number and description**
- 4. Quantity**

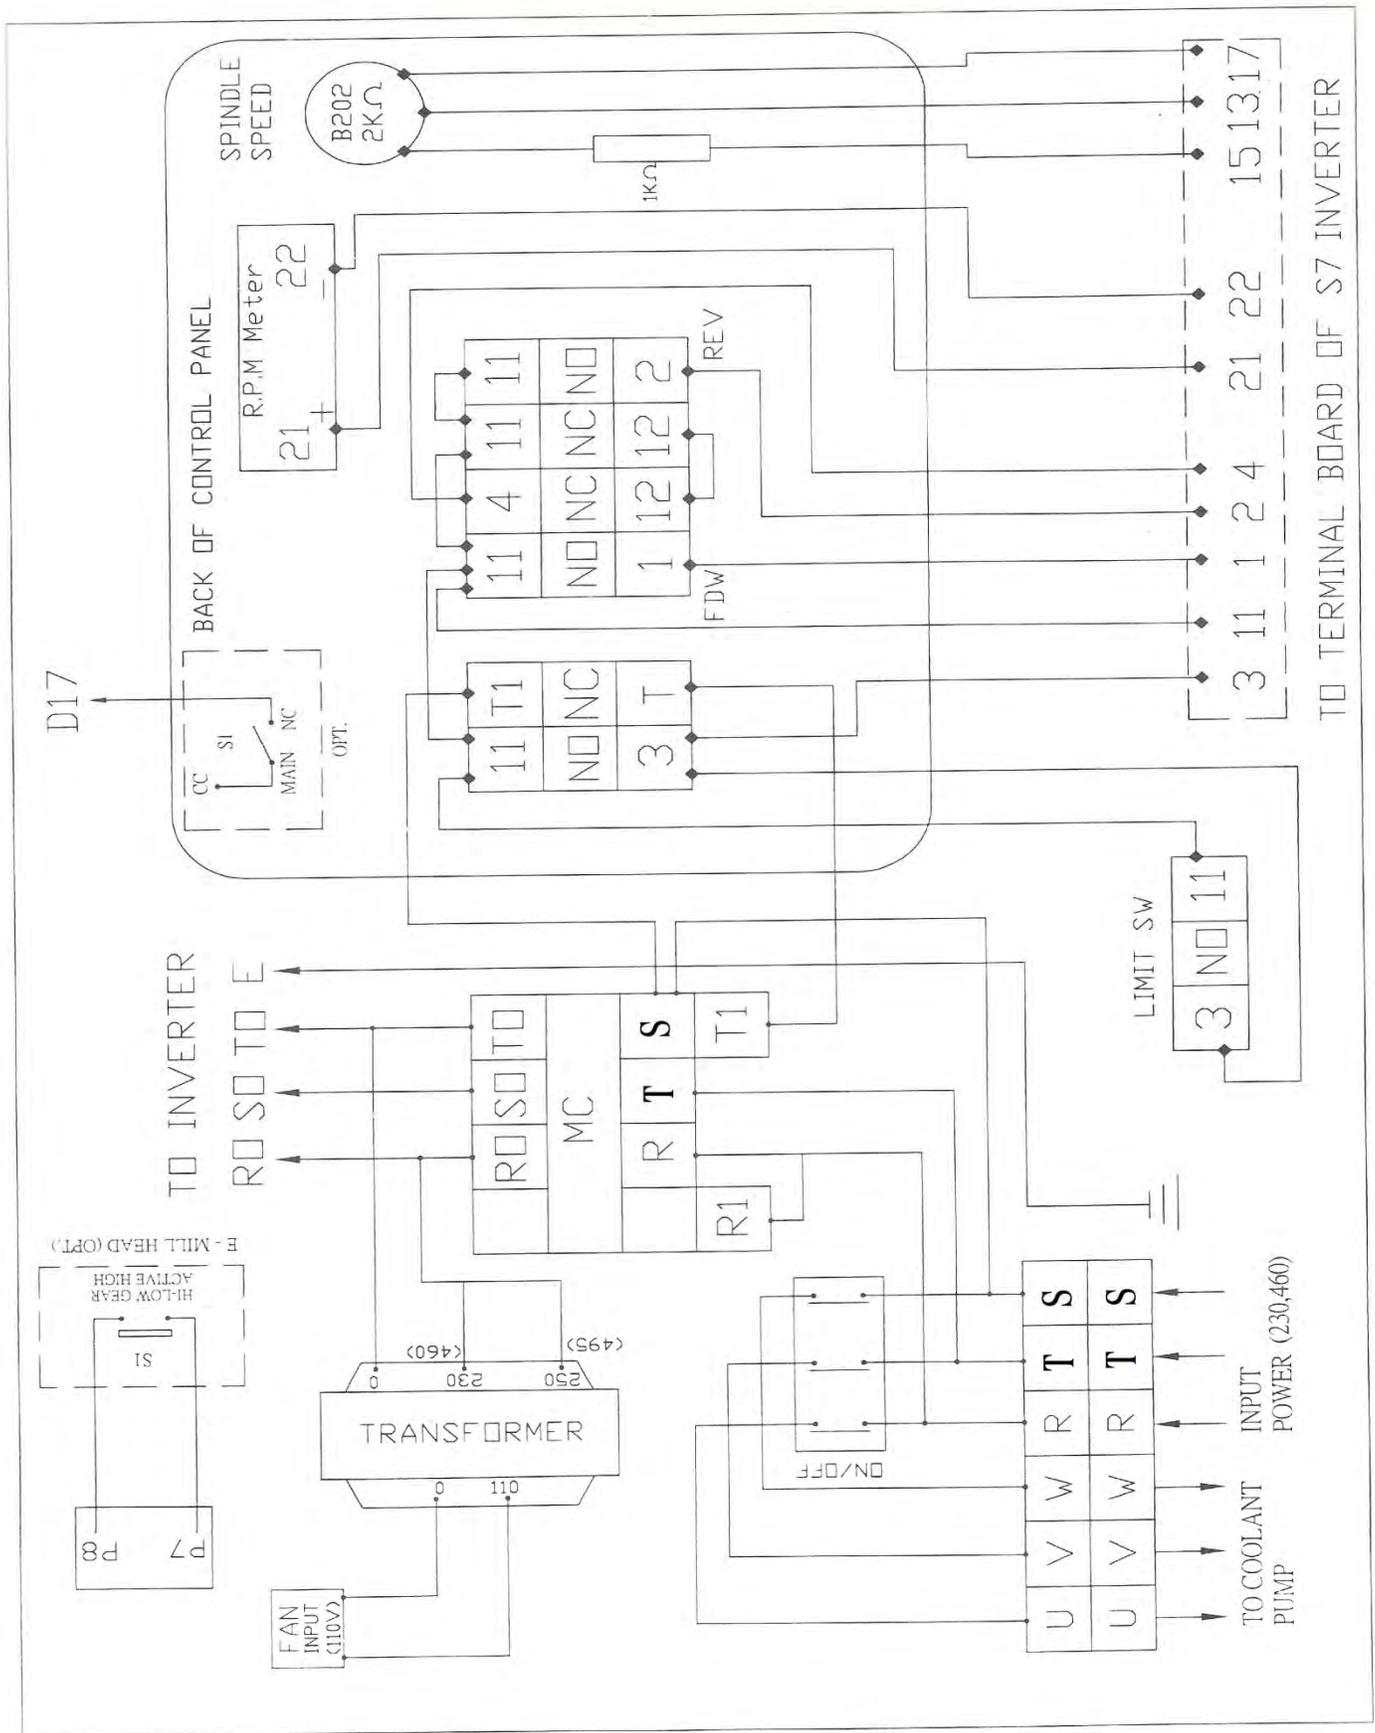

Note: If the machine is shipped with CNC control, in order to get its parts information, please refer to its supplied control manuals to find the correct part number and specification. And please contact the original control manufacturer for the ordering instructions.

*****Trouble shooting on the control? Please contact control manufacturer's service department, they can get your question solved and get you going quickly. Any other question, please contact our service department. The phone numbers are listed at the front page of the manual. Or please visit our websites www.acerlinks.com, and www.aceronline.net, and leave us with your questions, we will response quickly. Thank you for your attention and have a great day!**
